

### Console Version

The OrgelKlavier™ is a "Portative" organ which delivers amazingly realistic pipe sounds captured by Ahlborn-Galanti's acclaimed *Sampled Wave Processing®* technology.

This is *not* a fun machine but a classic organ in the truest sense. Its flexibility and ease of use permits a myriad of possibilities for discriminating organists and situations needing the versatility of a truly satisfying instrument. The OrgelKlavier™ provides an ideal vehicle for chamber music concerts, continuo parts, choir room, home, chapel or a second organ in the church and wherever you need "pipes to go".

The presence of "divided" stops, as on some single manual pipe organs, adds even further possibilities for contrast. The 4 independent bass stops function like a Pedal Division and provide a fullness and resonance found in much larger instruments.

The excellent internal amplification and speaker system delivers extraordinary sound quality.

With its affordable pricing we think you'll find it hard to resist.

# The OrgelKlavier™
